

Internationalisation of health sciences curricula: A case study

Increasing non-communicable disease burden in the United Arab Emirates (UAE)

In 2010, chronic diseases accounted for **>27% of deaths** among Emirati population. There is a growing need for a highly trained health workforce to improve population health and wellbeing.

Australia: World class health care
Produces health graduates with a range of clinical skills and able to operate as a primary care practitioner.

TRANSNATIONAL CURRICULUM TRANSFER

Key considerations

- Cultural differences
- Contextual issues
- Administrative structures
- Institutional regulations
- English language skills
- Stakeholder expectations
- Professional scope of practice
- Student learning styles
- Community perceptions

Future health care infrastructure for the Emirates
Students will meet future UAE health care workforce needs.
